

Design Audit Kit v1.0

Reproducible AI Operations — Panolabo Engine

Stop AI failures before they happen.

This kit provides an operating structure for reproducible, auditable AI execution.

Docs: docs.engine.panolabollc.com

Why AI systems fail in production

Most failures are operational, not model-quality issues.

- Output variance (same input → different quality)
- Prompt dependency (key person leaves → system breaks)
- Missing validation (no acceptance criteria)
- Missing replay (can't reproduce results)
- No accountability ("AI said so")

This kit exists to eliminate these failure modes via contracts, validation, and logs.

Sample ends here

This is a shortened sample. The full kit includes templates, checklists, and report formats.
